

**IN THE CLAIMS:**

*Set forth below in ascending order, with status identifiers, is a complete listing of all claims currently under examination. Changes to any amended claims are indicated by strikethrough and underlining. This listing also reflects any cancellation and/or addition of claims.*

1 – 10. (cancelled)

11. (new) A mobile device, comprising:

a native display;

a processing unit;

a local memory of the mobile device coupled to the processing unit, the local memory configured to store image signals for display;

an interface to format and route signals between the mobile device and an external device coupled to the mobile device, the interface configured to perform format conversion between image signal formats used within the mobile device and at least one different image signal format utilized by the external device; and

the interface being operative to convert the format of image signals received from the external device into a format compatible for use by the mobile device.

12. (new) The mobile device of claim 11, where the at least one external device is selected from a group including a television, a monitor, a video cassette recorder (VCR), a video tape recorder (VTR), and a recordable DVD device.

13. (new) The mobile device of claim 11, wherein the external device is a video recording unit and the interface converts video signals stored by the video recording unit into a format compatible for local storage and display in the mobile device.

14. (new) The mobile device of claim 11, wherein the external device is a television and the interface converts video signals received from the television into a format compatible for local storage and display in the mobile device.

15. (new) The mobile device of claim 11, wherein the mobile device includes a transceiver and a baseband processing unit coupled to the processing unit to provide wireless communication and the mobile device is configured to permit video signals received from the external device to be transmitted from the mobile device.

16. (new) The mobile device of claim 15, further comprising a camera native to the mobile device.

17. (new) The mobile device of claim 11, wherein the interface is configured to convert the format of video signals output from the mobile device into the image signal format of the external device.

18. (new) The mobile device of claim 11, wherein the interface is coupled to the display and to the processing unit.

19. (new) A mobile device, comprising:

a native display;

a processing unit;

a local memory of the mobile device coupled to the processing unit, the local memory configured to store image signals for display;

an interface to format and route signals between a set of components of the mobile device and an external video device coupled to the mobile device, the interface configured to perform format conversion between image signal formats used within the mobile device and at least one different image signal format utilized by the external video device ; and

the interface being operative to convert the format of image signals output from the mobile device to the external video device into the image signal format of the external video device with the interface being further operative to convert the format of image signals received from the external video device into a format compatible for use by the mobile device.

20. (new) The mobile device of claim 19, wherein the external video device is a television and the interface converts video signals received by the television into a format compatible for local storage and display in the mobile device.

21. (new) The mobile device of claim 19, wherein the external video device is a video recording storage unit and the interface converts video signals stored by the video recording unit into a format compatible for local storage and display in the mobile device.

22. (new) The mobile device of claim 19, wherein the mobile device includes a transceiver and a baseband processing unit coupled to the processing unit to provide wireless communication and the mobile device is configured to permit video signals received from the external video device to be transmitted from the mobile device.

23. (new) A mobile device, comprising:

a native display;

a processing unit;

a transceiver and a baseband processing unit coupled to the processing unit to provide wireless communication

a local memory of the mobile device coupled to the processing unit, the local memory configured to store image signals for display;

an interface to format and route signals between a set of components of the mobile device and an external video device coupled to the mobile device, the interface configured to perform format conversion between image signal

formats used within the mobile device and at least one different image signal format utilized by the external video device; and

the mobile device configured to receive video signals from the external video device and convert the received video signals into a format compatible for use by the mobile device for storage, display, or wireless transmission.

24. (new) The mobile device of claim 23, wherein the external video device is a television and the interface converts video signals received by the television into a format compatible for local storage and display in the mobile device.

25. (new) The mobile device of claim 23, wherein the external video device is a video recording storage unit and the interface converts video signals stored by the video recording unit into a format compatible for local storage and display in the mobile device.
